Kisnner Obando

Full-Stack JavaScript Developer | Managua, Nicaragua | Remote
kisnnerobando7@gmail.com | +505 8927 1455 | kisnner26.github.io | github.com/kisnner26 | linkedin.com/in/kisnner-obando-16014029b

SUMMARY

Full-stack JavaScript and TypeScript developer who learns by shipping. 40+ public projects, 42 pull requests sent to other people's projects and 11 accepted (radare2, Node.js, Geode, AltStore, AltSign), and a fix that AltStore's maintainer merged and its official account credited publicly. I write tested code, keep commits small and reviewable, care about data integrity, and build with LLMs daily (Claude API, custom MCP servers). Looking for remote roles with Node.js, React and TypeScript.

SKILLS

Languages: JavaScript, TypeScript, Python, PHP, C#, Swift, Java, SQL, C (reading and patching)

Backend and data: Node.js/Express, GraphQL, WebSocket, worker_threads, Laravel, Spring Boot, REST APIs, JWT auth, PostgreSQL, MySQL, SQL Server, Supabase (row-level security, Realtime); ETL and SSIS

Frontend: React, Vite, PixiJS, Three.js, Canvas, Web Audio, service workers, HTML/CSS, WordPress

AI: Claude API, prompt engineering, tool use, custom MCP servers, LLM pipelines with human approval steps

Practices: Git/GitHub, CI, atomic commits, code review, Vitest and node:test, concurrency and offline-sync testing, OWASP Top 10, RBAC

PROJECTS

Frutiger Aero Islands: multiplayer browser game — React, TypeScript, PixiJS, Three.js, Supabase

- A decorable island drawn entirely in code, a 3D planet with other players' islands, and two battle-royale modes with online rooms over Supabase Realtime; deterministic simulations covered by 125 unit tests.
- Data in Supabase with row-level security and RPCs for the rules the client can't be trusted with; resilient fetching, error boundaries and a service worker so the game degrades instead of freezing. Playable without an account: kisnner26.github.io/frutiger-aero-islands

relevo: CPU-bound job service — Node.js, worker_threads, GraphQL, WebSocket

- Heavy jobs leave the event loop: a worker_threads pool, three ways to request them (REST, GraphQL, WebSocket) and my own load balancer across instances; 36 tests and CI on Node 20 and 22.

Anaquel: inventory SaaS (private) — PHP, Laravel, MySQL, service worker

- Multi-tenant system with isolated data per company: sales, cash register, reports, branches, multi-currency, per-country tax invoicing, demand forecasting.
- Offline mode with duplicate-free sync; tests for offline/online transitions and concurrent stock changes.

Aula Abierta: open-source platform for language academies — Laravel 11, React 18, TypeScript, PostgreSQL

- Classrooms, attendance, rubric-based grading, spaced-repetition flashcards, live quizzes, QR passwordless entry, S3-compatible storage.

PRELO and Tonada — Node.js, PostgreSQL, SwiftUI, Web Audio

- **PRELO:** REST API (JWT, order state machine, coupons, SMTP, image uploads, no ORM) consumed by a native iOS client.
- **Tonada:** audio or video to piano in the browser: an FFT pitch detector runs every 23 ms, exports MIDI, and nothing leaves the user's machine.

Also — github.com/kisnner26

- EtlStudio (C#, SQL Server, SSIS: warehouse generator with reconciliation), Lumora (lyric videos drawn on canvas), Umbra (steganography lab), WC26 Studio (Monte Carlo model), Nexo and Zarcillo (Mac, iPhone and Watch apps), Geode mods.

OPEN SOURCE

- **AltStore / AltSign:** traced why AltServer stopped signing in to Apple on macOS 27 (error -80045, then an HTTP 503) and proposed the fix (altstoreio/AltStore#1834, rileytestut/AltSign#61). The maintainer merged both and used them to fix AltStore Classic; the project's official account credited the fix publicly. Unofficial build: 1,500+ downloads. Write-up: kisnner26.github.io/writeups/altstore-80045
- **Accepted:** radare2 (nested memory references, help-text cleanups), Node.js (QuicStream docs), Geode (wrong Windows addresses in bindings), pyelftools, swift-llm-kit (Keychain race), ClaudeHub, PeerBeam. **In review:** Apple swift-nio and swift-nio-extras (fixes a real crash), rizin, GEF, pefile.

EXPERIENCE

Freelance Web Developer — Jan 2025 - Present

- Websites in HTML, CSS, JavaScript and WordPress for local and international clients (Fiverr). Own requirements, delivery and revisions directly with clients.

Technical Support, INATEC — Jan 2026 - Feb 2026

- Diagnosed and resolved hardware, software and user issues; documented fixes and explained them clearly to non-technical staff.

EDUCATION AND CERTIFICATIONS

B.Eng. Computer Information Systems, Universidad Americana (UAM), Managua — 2022 - present

CS50x (Harvard, 2024) | CS50P (Harvard, 2025) | Building with the Claude API (Anthropic, 2026) | Claude Code in Action (Anthropic, 2026) | Prompt Engineering (LinkedIn, 2025)
