SUMMARY

Systems engineering student and freelance developer who ships. 30+ original public projects on GitHub, from transactional backends and data pipelines to native apps, plus bug fixes accepted into open-source tools such as radare2. I write tested code, care about data integrity, work in small reviewable commits, and build with LLMs daily (Claude API, custom MCP servers). Open to remote full-stack JavaScript roles (Node.js, React, TypeScript).

SKILLS

Languages: JavaScript, TypeScript, Python, PHP, C#, Swift, SQL, C (reading/patching)

Backend and data: Laravel, Node.js/Express, Spring Boot, REST APIs, JWT auth, PostgreSQL, MySQL, SQL Server; ETL, star-schema warehouses, SSIS; data profiling and reconciliation

Frontend: React, Vite, Three.js, HTML/CSS, WordPress

AI: Claude API, prompt engineering, tool use, custom MCP servers, LLM-assisted pipelines with human approval steps

Practices: Git/GitHub, atomic commits, code review, concurrency and offline-sync testing, OWASP Top 10, RBAC, Keychain/secrets handling

PROJECTS

EtlStudio: automated data warehouse and ETL generator C#, SQL Server, SSIS, ODBC

- Windows app that turns a Databricks (ODBC) source into a star-schema warehouse and a generated SSIS package, with Claude drafting the plan and a human approving it.
- Profiles the source before touching anything (null and date-range checks), validates the package, loads, then reconciles target against source and writes an evidence report. Secrets are masked before any text reaches the model.

Aula Abierta: open-source platform for language academies Laravel 11, React 18, TypeScript, PostgreSQL

- Full-stack REST platform: classrooms, attendance, rubric-based grading, spaced-repetition flashcards, live quizzes, QR passwordless entry, S3-compatible file storage.

Inventory SaaS (private) PHP, Laravel, MySQL

- Multi-tenant system with isolated data per company: sales, cash register, reports, branches, multi-currency, per-country tax invoicing, demand forecasting.
- Offline mode with duplicate-free sync; tests for offline/online transitions and concurrent stock changes.

PRELO: campus pre-order app Node.js, Express, PostgreSQL (no ORM), SwiftUI

- REST API with JWT auth, order state machine (received to delivered or no-show), vendor menus, coupons, SMTP notifications, image uploads; consumed by a native iOS client.

Other work github.com/kisnner26

- Frutiger Aero Islands (React, TypeScript, PixiJS, Three.js, Supabase with row-level security), relevo (Node.js job service: worker_threads pool, REST, GraphQL and WebSocket, own load balancer), Lumora (lyric videos drawn with canvas), Tonada (audio to piano in the browser), Umbra (steganography lab), wc26-studio (Monte Carlo model), Nexo (Mac, iPhone and Watch apps).

OPEN SOURCE

- **AltStore / AltSign:** traced why AltServer stopped signing in to Apple on macOS 27 (error -80045, then an HTTP 503), probed Apple's edge without credentials and proposed the fix (altstoreio/AltStore#1834, rileytestut/AltSign#61; open, not merged). An unofficial build of it has 1,000+ downloads and users confirmed sign-in in the public issue. Write-up: kisnner26.github.io/writeups/altstore-80045
- **radare2:** merged fix for nested memory references in numeric expressions; merged help-text cleanups. **Node.js:** merged docs fix for QuicStream types. **Geode:** merged fix of wrong Windows 2.2091 addresses in the bindings.
- **pyelftools, ClaudeHub, PeerBeam:** merged contributions. **swift-llm-kit:** merged fix for a Keychain race on concurrent saves.

EXPERIENCE

Freelance Web Developer Jan 2025 - Present

- Websites in HTML, CSS, JavaScript and WordPress for local and international clients (Fiverr). Own requirements, delivery and revisions directly with clients.

Technical Support, INATEC Jan 2026 - Feb 2026

- Diagnosed and resolved hardware, software and user issues; documented fixes and explained them clearly to non-technical staff.

EDUCATION AND CERTIFICATIONS

B.Eng. Computer Information Systems, Universidad Americana (UAM), Managua 2022 - present

CS50x (Harvard, 2024) | CS50P (Harvard, 2025) | Building with the Claude API (Anthropic, 2026) | Claude Code in Action (Anthropic, 2026) | Prompt Engineering (LinkedIn, 2025)
